

No child is identical with its parents. Small changes take place in any group of animals or plants. "Descent with variation" is a common fact of life, but the extent of this variation cannot be proved to be unlimited. In fact, the evidence points in the opposite direction. The Bible does not precisely define the word "kind" as used in Gen. 1:11,12,21,24,25, etc. Within a "kind" development, or variation, is possible. Development ~~is~~ from one "kind" into another ~~is~~ ruled out by the Biblical statements.

In the Darwinian sense, "evolution" is usually taken to mean that all forms of life have developed by natural processes from one simple beginning. If the term evolution is ~~used~~ used in this sense, it ~~is~~ sharply contradicts the Bible at many places, but nowhere ^{more} ~~more~~ than in its account of the creation of man and woman.
