

7

I have here a book by Huxley's grandson , "Evolution and Action," by Julian Huxley, who was formerly head of USE- UNESCO, and Julian Huxley says here Natural Selection accounts ~~ce~~ for everything and produced man. This is a complete answer to everything and this is ~~a complet~~ complete answer to all your ~~a~~ctions, and then you have another half of scientists who say Darwin's theory completely disproves everything , there is no such ~~h~~ thing but the fact of evolution is established . But they are all equally dogmatic. Half of them are absolutely sure that Darwin's system holds today and the other half there is no evidence for Darwin's system but they all agree that evolution is a fact that there can be no question about . Well, there's much more that could be said on this third phase ~~that~~ but the clock is moving , and I must say a word or ~~two~~ two about the fourth phase . Thr fourth phase is the question , "How much real evidence is there for evolution," and here I ~~den~~ do not claim to speak authoritatively, but I do say this, that ~~with~~ when you get a new theory , most any theory, at first it ~~af~~ appears very complex and it seems that it was a most marvelous act of someboyl's mind, that saw the answer to this particular problem, but then as it is studied and worked to and explained , it gets simpler and simpler, until it gets to where any school-boy can prove it. And you say, how could people be so foolish, not ~~wk~~ to know this. And that has definitely not been with evolution. That we can definitely say. ~~Has~~ Huxley said when it first came out , he said, "There's no proof of it, because he said nobody was there." And there couldn't be any real-~~pre~~- proof of it, but he said ~~there~~ that it is a very good hypothesis , a very good suggestion. Well, the evidence as given by New man in here are all very definitely circumstantial evidence.

The
