

introduction: The fact of evolution is just as clear as the fact that the mountains are standing over there and you can see them! But he said, The method of evolution; the means by which it is performed, the details of it, there are many, many theories and we do not know." Well, evolution is a matter of method. How can you say it is plainly a fact, unless you can explain the method? There are many many details at which arguments have been advanced and then have been completely disproven. Changes have been made and added to the viewpoint, but the great mass of professors at our universitites believe that the fact of evolution is something that is established. How did the change come about?

This book is entitled The+Darwinian Revolution. When anyone thinks of evolution, they think naturally of Chas. Darwin. Yet if you look into the writings, you find there were many who believe in evolution in the sense that everything developed out of other things, long before Darwin wrote. Drawin wrote his book in 1858 -- (1859). In 1847, about 10 years before, Disrelli published a novel written in it, and he had one of his characters say, All is development; the principle is perpetually going on. First there was nothing, then there was something. Then I forget the next. I think there were shells, then fish, then we came. Let's see. Did we come next? Never mind. We came last. In the next change there will be something very superior to us -- something with wings! The man answers: Oh, but it's all true. You understand it's all science."

Now that was written 10 years before Darwin wrote. There was a change taking place in the attitude of many peoppe and there were many who believed in what is called evolution long before
