tini's reconstruction. The facts are that the house was blown up with
gunpowder that night and that Darnley's body was found stabbed to death
right near it. And the people in Edinburgh felt that Mary had wanted to
get rid of him and either she or Boswell or the two together had arranged
it so that the place would be blown up. Now it's strange his body would
be outside instead of his having been killed in the explosion of gun-
powder. Therefore the guess of Sabatini's is probably a good guess that
he heard something xxxkwrong and had gotten out - xxxkhixanyway the house
was blown up and wrecked and his body was found outside. Among the var-
ious publications which came out which were distributed by people - nobody
knowing who they came from - there was one which was a paper with a pic-
ture on of a little baby crying out "Avenge my father". And that's the
feeling of the people in Edinburgh that - nobody questioned Boswell at
the time and most of them thought that Mary had herself been a party to
it. Well if Mary had had the force of character to keep out of such
doings as this, she might have changed the whole religious situation in
Scotland. But you couldn't carry on things like this very long and
have a people who were accustomed to Knox's preaching, sit quietly by.
And the result was that the Scottish people rose up against Boswell.
But before that happened, the thing was getting around, the feeling was
rising - but before it happened she married him. Three months after her
husband was murdered, she married Boswell. She married him and then
there was an uprising against her and she called on the French to send
in troops to help her and the people declared that this was treason
for her to call in these troops to help her and therefore the Parliment
voted that she should no longer be Queen, That she had forfeited the
throne by this treason. Now of course what they really were excited
about was the murder of her husband but it would have been very dif-
ficult to have proved that and she forced things by these other measures
