

Fig. 10. Fossilized echinoderm specimens from a depth of 2,900 feet in the Eniwetok atoll. These are close relatives of the starfishes, sand dollars, and sea urchins. Note the radial symmetry of this animal, with columns of pores for water circulation radiating out from the center. Magnification approximately 12 diameters. Echinocyamus petalus. From P. M. Kier, "Fossil echinoids from the Marshall Islands," U. S. Geological Survey Professional Paper no. 260-GG, 1964, Plate 302, Figures 1 and 5.
